

Recombinant human IL-7 protein (Qk095-CTG)

Type: Cell Therapy Grade

Available for purchase: Unit Size (µg): 25, 50, 100, 500, 1000

Buy online with secure credit card or purchase order.

Product Information

Interleukin-7 (IL-7) is a vital cytokine essential for immune system regulation, particularly in the development and maintenance of T cells, playing a crucial role in both adaptive and innate immune responses. Recombinant human IL-7 stimulates the development of lymphoid progenitor cells.

Qkine has optimized the IL-7 manufacture process to produce a highly bioactive protein with excellent lot-to-lot consistency for enhanced experimental reproducibility. Cell therapy grade IL-7 is a highly pure and bioactive 17.5 kDa monomer with extensive quality testing.

Qkine [cell therapy grade](#) high purity animal origin-free proteins are manufactured as GMP grade equivalents in an ISO 9001:2015-certified facility, under ISO 20399:2022 standards with GMP compliance, defined quality criteria and documentation.

Alternative protein names

Interleukin 7, IL7, IL 7, Qk95, Qk95 CTG, IL-7 GMP

Molecular weight

17.5 kDa (monomer)

Protein Uniprot number

High purity human IL-7 protein (Uniprot number: P13232)

Species reactivity

- human
- species similarity:
- mouse - 56%
- rat - 57%
- bovine - 71%
- porcine - 69%

Product Information

- Certified animal origin-free (AOF)
- Cell and gene therapy grade
- Manufactured in our ISO 9001:2015 facility in Cambridge, UK
- Lot-to-lot consistency in bioactivity
- Full traceability and documentation
- Carrier protein-free, tag free
- Expressed in *E. coli*
- Lyophilized from acetonitrile, TFA

Reconstitution instructions

- Resuspend in sterile-filtered water at >50 µg/ml

Featured applications

- Immune cell therapy expansion
- CAR-T cell therapy manufacturing

Further quality assays

- Mass spectrometry: single species with expected mass
- Purity >98%, by SDS-PAGE quantitative densitometry
- Recovery from stock vial: >95%
- Sterility tested and mycoplasma negative
- Endotoxin: <0.05 EU/µg protein
- Residual host cell protein <10 ng/µg
- Residual host cell DNA <10 ng/µg
- N-terminal sequence analysis

Scientific Information

Bioactivity

Recombinant IL-7 activity was determined using a SRE luciferase reporter assay in transiently transfected HEK293 cells co-transfected with IL-7R α and IL-7R γ . Transfected cells were treated in triplicate with a serial dilution of IL-7 for 3 hours. Firefly activity was measured and normalized to the control Renilla luciferase activity. Data from Qk095 lot #204669. EC50 = 1.20 ng/ml (69 pM).

The specific activity of cell therapy grade IL-7 is >1.0 x 10⁸ IU/mg, which is calibrated against the human IL-7 WHO standard (NIBSC code: 90/530).

Purity

Recombinant IL-7 migrates as a major band at approximately 17.5 kDa (monomer) in reduced (R) and non-reduced (NR) conditions. No contaminating protein bands are present. The purified recombinant protein (3 μ g) was resolved using 15% w/v SDS-PAGE in reduced (+ β -mercaptoethanol, R) and non-reduced (NR) conditions and stained with Coomassie Brilliant Blue R250. Data from Qk095 lot #204669.
