Product Information

GECKO™ is a chemically defined, animal component free mix of adhesion factors to support adherent cell culture. Fetal bovine serum (FBS) contains a complex mixture of adhesion-promoting factors that enable attachment on standard tissue culture plastic. When culturing cells in serum-free or chemically defined media, these adhesion cues are often no longer present. As a result, many adherent cell types require an explicit surface strategy to support attachment, spreading, and early survival.

GECKO™ has been validated as a defined, animal-free coating which supports a broad range of adherent cell types.

Alternative protein names

adhesion factors, coating

Product Size Wording

GECKO 1.25 mg

Protein Uniprot number

1.25 mg GECKO™ adhesion factor cocktail

Species reactivity

- human

Product Information

- Animal origin free (AOF)
- Store frozen, -5°C to -20°C

Reconstitution instructions

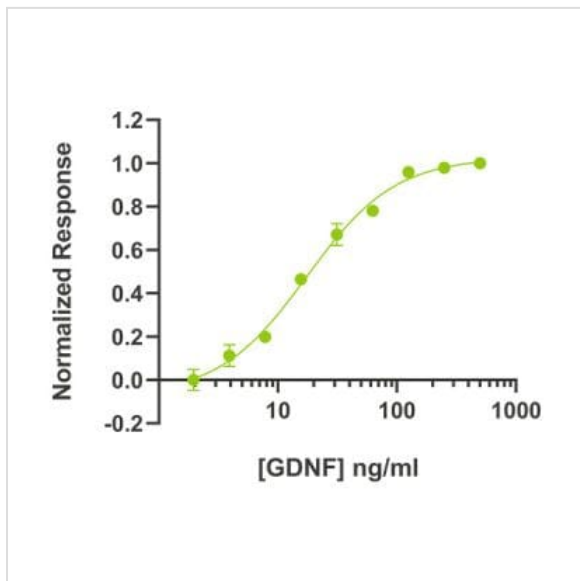

- GECKO resuspension

Featured applications

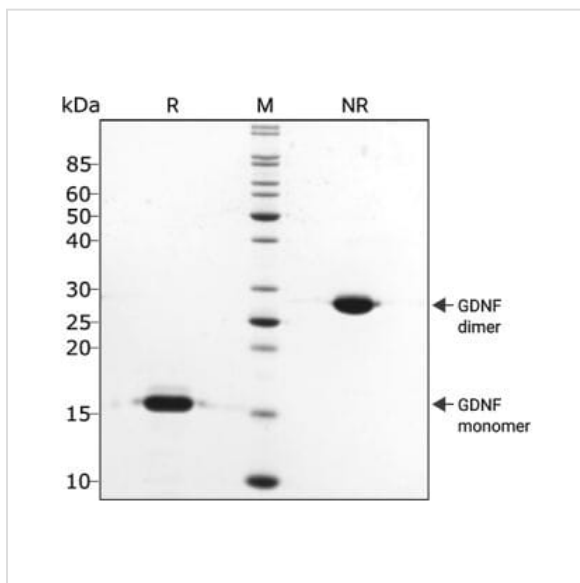

- Primary cell culture
- Culture of immortalized cell lines
- Chemically defined media
- Serum-free media development
- Cell attachment
