Product Information

Defined Bioscience's HiDef® S8 is a complete, serum-free, defined formulation designed for the high-density, microcarrier-free suspension expansion of human pluripotent stem cells (PSCs) in stirred-tank bioreactors and other suspension culture systems.

To better support small-scale experiments and pilot studies, the HiDef® S8 400x supplement is offered in two vial sizes. Standard vials prepare 500 ml of complete medium, while miniature vials prepare 50 ml, enabling convenient preparation of smaller volumes without excess waste.

HiDef® S8 is a unique formulation that enables high-yield, scalable suspension expansion of human pluripotent stem cells without the need for microcarriers.

Product Size Wording

Order fulfilled by Qkine

Species reactivity

- optimized for human cells

Product Information

- Fully defined
- High efficacy
- Convenient use

- Animal origin free (AOF)
- Store at -70°C, protect from light

Reconstitution instructions

- Liquid

Featured applications

- Microcarrier-free suspension expansion of human pluripotent stem cells (PSCs)
