

FGF-2 species-matched kit (Qk501)

Type: Growth factor discovery kits

Available for purchase: Qk501: FGF-2 species-specific kit

Buy online with secure credit card or purchase order.

Product Information

For rapid testing of multiple species FGF-2 and thermostable FGF-2 to replace human proteins in cell cultivated meat. FGF-2 is commonly used in [cultivated meat](#) cell culture for the differentiation and maintenance of cells, but human FGF-2 is often used for this process.

It is generally accepted that best practice is to use growth factors from the target species for reasons of consumer acceptance, regulatory considerations and species-matched activity. Receptor binding affinity and efficacy may differ depending on each species, resulting in higher concentration necessary for desired results in culture if non-species specific FGF-2 is used.

The FGF-2 species-matched Discovery Kit (Qk501) contains 6 different forms of FGF-2, allowing easy optimization studies for researchers looking to replace human growth factors with species-matched FGF-2, as well as thermostable versions of FGF-2 proteins.

Alternative protein names

Basic fibroblast growth factor, bFGF, FGF- β , FGF2, FGF 2, Fibroblast growth factor-basic, HBGF-2, betaFGF, beta FGF

Product Information

- >98%, by SDS-PAGE quantitative densitometry
- Bioactivity Guaranteed
- Expressed in *E. coli*
- Animal origin-free (AOF) and carrier protein-free

- Manufactured in our Cambridge, UK laboratories
- Lyophilized

Reconstitution instructions

- Discovery kits

Featured applications

- Cellular agriculture and cultivated meat cell culture media optimization
- Serum-free media development

Further quality assays

- Mass spectrometry: single species with expected mass
- Recovery from stock vial: >95%
- Endotoxin: <0.05 EU/μg protein

Scientific Information

Bioactivity

Zebrafish FGF-2 - Qk002 - **100 µg**

Used extensively to support the maintenance and proliferation of human and mouse induced pluripotent (iPSC) and embryonic stem cells (ESC)

Bovine/porcine FGF-2 (154 aa) - Qk056 - **50 µg**

The long form of FGF-2 used for the development of optimized serum-free culture media for species-matched bovine (cow) and porcine (pig) cultivated meat and veterinary research applications.

Bovine/porcine FGF-2 (145 aa) - Qk040 - **50 µg**

For the development of species-matched bovine (cow) and porcine (pig) cellular agriculture protocols and veterinary research applications.

Bovine/porcine FGF2-G3 (145 aa) - Qk080 - **50 µg**

thermostable engineered form of bovine FGF-2. This is the 145 aa mature domain of FGF-2 ([Qk040](#)). The functional half-life has increased from <10 h (wild-type) to >7 days (FGF2-G3)

Bovine/porcine FGF2-G3 (154 aa) - Qk081 - **50 µg**

A thermostable engineered form of bovine FGF-2. This is the 154 aa mature domain of FGF-2 ([Qk056](#)). The functional half-life has increased from <10 h (wild-type) to >7 days (FGF2-G3)

Human FGF2-G3 (154 aa) - Qk053 - **50 µg**

A thermostable engineered form of human FGF-2. Qk053 is the 154 aa mature domain of FGF-2 ([Qk027](#)). The functional half-life has increased from <10 h (wild-type) to >7 days (FGF2-G3).
